

The great climate robbery

how the food
system drives
climate change
and what we can
do about it

"It's about time that the role agriculture plays in the climate crisis - and the role it could play in the solution - got a concentrated dose of attention. This is fine work that will provoke much new activism!"

Bill McKibben

The great climate robbery

How the food system drives climate change and what we can do about it

New book by GRAIN ▪ December 2015 ▪ How to order: <https://www.grain.org/e/5354>

In 2012, GRAIN published *The great food robbery*. We thought it was high time to do a sequel.

Over 25 years, GRAIN has worked with social movements and organisations around the world to defend local food systems and cultures from the advance of industrial agriculture. Our work has also involved connecting this analysis to larger issues affecting the planet, linking peoples' struggles situated within the food system to those happening in other areas. Climate change is one important example of this. ***The great climate robbery*** explains how the industrial food system is a major driver of climate change and how food sovereignty is critical to any lasting and just solution. With governments, particularly those from the main polluting countries, abdicating their responsibility to deal with the problem, it has become critical for people to take action into their own hands. Changing the food system is perhaps the most important and effective place to start. This book shows you how.

We hope this book will help readers to understand better the ways in which corporations seek to increase their control over the food system so that this control can be more effectively challenged. We hope it will inspire people to take action and we hope that it will provide readers with information and analysis that they can use directly in their own work.

Contents

1. Food & climate change: the forgotten link

- How the industrial food system contributes to the climate crisis
- Food sovereignty: five steps to cool the planet
- The Exxons of agriculture
- How REDD+ projects undermine peasant farming and real solutions to climate change
- Trade deals boosting climate change: the food factor

2. Hungry for land

- The solution to climate change is in our lands
- Family farm stories are not the fairy tales we're being told
- Hungry for land: small farmers feed the world with less than a quarter of all farmland
- Squeezing Africa dry: behind every land grab is a water grab
- Asia's agrarian reform in reverse: laws taking land out of small farmers' hands
- The landgrabbers of the Nacala Corridors
- Socially responsible farmland investment: a growing trap

3. The struggle for seeds

- Seed laws that criminalise farmers
- Trade deals and farmers' seeds
- GMOs: feeding or fooling the world?
- Yvapuruvu Declaration: seed laws - resisting dispossession

4. Controlling the food system

- Corporations replace peasants in China's new food security agenda
- Defending people's milk in India
- Food sovereignty for sale: supermarkets and dwindling people's power over food and farming in Asia
- How does the Gates Foundation spend its money to feed the world?
- Planet palm oil: peasants pay the price for cheap vegetable oil
- Free trade and Mexico's junk food epidemic
